Figurine fragment which includes an smoothed, applied nodule. Hardness = 1-2. There is no fine core, exterior burning, or fire clouding. The exterior surface is quite smooth, but the interior surface is rough and uneven. It is dotted with dips, ridges, and peaks. The nodule does not appear to have been worked much after it was attached as the points of juncture are still readily visible. It was, however, hollowed a little, creating a depression on the upper surface. There are a few abrasions or possible brush marks below the nodule and the surface above it has been rounded and smoothed as well. There are no handle scars, ~~that~~ paint, slip, or incision. The nodule is placed 1.7 cm below the upper margin of the fragment.
